EX-15

Endpoint security monitoring

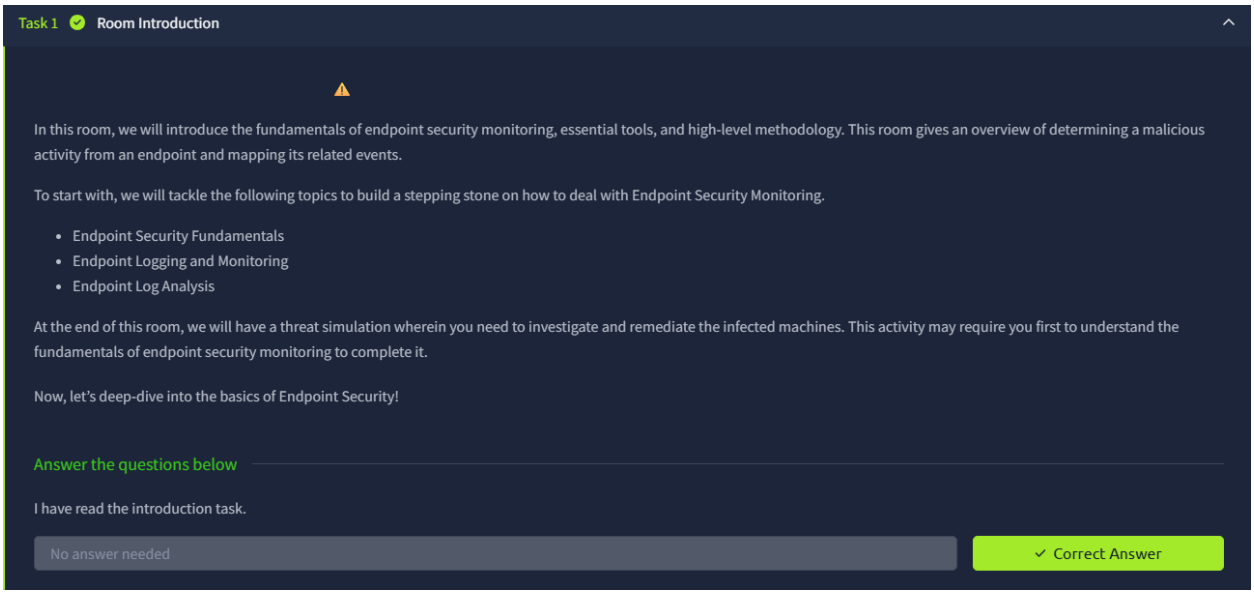
AIM:

To monitor and protect endpoint devices like computers and servers from cyber threats and unauthorized access.

PROCEDURE:

- Install endpoint security tools (EDR/antivirus) on devices.
- Monitor system activities and processes continuously.
- Collect and analyze endpoint logs and alerts.
- Detect suspicious behavior or malware activity.
- Isolate or block compromised endpoints.
- Respond and remediate the detected threats.

TASK-1:



TASK-2:

- Invoked network traffic
- Handles such as files or directories opened
- DLLs and memory-mapped files loaded

To learn more about Sysinternals, you may refer to the Sysinternals Room.

Answer the questions below
